In the world of computer games, new development is always interesting to watch as a matter of principle. Usually, the publisher starts the project, and the developer takes care of the development. However, for Far Cry: New Dawn, Ubisoft has a different approach – not only do they start the project, but they’re in charge of development as well. In the latest video interview, Far Cry: New Dawn game director Nicolas Duval has explained the development process and the philosophy of Far Cry games. One of the biggest principles that led to Far Cry 4 were its open worlds and broad thematic scope, and Ubisoft Montreal is staying true to those aspects in Far Cry: New Dawn. At the same time, we wanted to create a more open world, more sandbox-like, so we implemented the power of the PC.” A lot of other developers follow a strong narrative in their game design, and this approach worked well for Far Cry 4, which was always described as having “strong” narrative elements. However, Duval feels that a strong narrative is not necessarily the best method of providing a strong gaming experience. “We tried different things and found that an open world is the best approach for us,” he added. “To me, a strong narrative... I don’t think it’s the best approach for everybody. We tried to do something different and we’re very happy with the result.” Far Cry: New Dawn will be available on March 1, 2018
