AutoCAD Product Key Design Suite The original AutoCAD program featured vector-based graphics, enabling users to draw objects, produce views, and convert between geometric data and their visual representations. Object-oriented, it could process drawings in a variety of file formats. The AutoCAD 2.0 release (originally titled AutoCAD Graphics), released in 1984, was the first version with user-customizable palettes, and introduced a 3-D component. In the 1985 AutoCAD 3.0 release, the AutoCAD package included AutoCAD Extended, which added new features and enhanced the earlier ones. Other development versions were released in 1985 (AutoCAD 3.1), 1987 (AutoCAD 3.2), 1989 (AutoCAD 3.5), and 1994 (AutoCAD 4.0). Over the years, development versions became more sophisticated, and the version numbering scheme is based on the year of the major release. Autodesk released AutoCAD LT in 1997, which remained a separate package (as of AutoCAD LT 2007) until the introduction of the AutoCAD LT software bundle in 2018. In the late 1990s, AutoCAD created an IP (Intellectual Property) subsidiary, Autodesk IP, to license the rights to certain intellectual property that was acquired during the company's early years. In January 2013, Autodesk and the Carlyle Group announced that Autodesk had agreed to acquire the intellectual property of Autodesk IP in exchange for a cash payment. Also in the late 1990s, Autodesk launched an online service for AutoCAD, known as ArcCAD Online (ACO). ACO is an online service which enables users to perform many of the same functions as the desktop AutoCAD software, from creating drawings to storing and sharing them with others. AutoCAD and ArcCAD now support mobile apps for Android and iOS, and the suite is available on the web.

ObjectARX ObjectARX is the name of a C++ API that provides a programming interface to AutoCAD applications. ObjectARX is a C++ class library which provides a mechanism for: adding the ability to interact with AutoCAD from non-AutoCAD applications, such as Dassault Systemes' 3D Studio Max, Windows Form application or Windows Presentation Framework (WPF) application. creating specialized AutoCAD components, such as: a component to model in AutoCAD or load drawings. These components can be implemented with the Microsoft Foundation Classes (MFC), Qt/C++, Embarcadero RAD Studio and others. An additional advantage is that all the components can use the same OLE interfaces and OLE Automation. creating custom editor interfaces to a 3D model or other types of AutoCAD objects. In 2008, ObjectARX was introduced as a feature of AutoCAD 2010, with 2008 being its first release. ObjectARX was replaced by VAPI in AutoCAD 2011, however ObjectARX still exists.

**Outline Architecture**

The ObjectARX architecture is based on the following principles:

- the drawing server and drawing client as separate objects
- the drawing server as a local COM server
- the drawing client as a COM client
- the Autodesk's ObjectARX SDK and a combination of a third-party library (i.e. openframeworks)

**Drawing server and drawing client**

The drawing server is a drawing object that processes requests to draw or redraw objects (typically drawings or components). The drawing server is the application programming interface that provides the communication between the drawing client and the drawing server. The drawing client is a component that requests drawing server to draw or redraw an object or display a drawing.

**Drawing server**

The drawing server is an object that can process requests to draw or redraw components, drawings, and other objects. The drawing server is an API that works with the drawing client through the drawing client's programming interface. The drawing server is implemented by the drawing application and is the main point of interaction with AutoCAD.

**Drawing client**

The drawing client is an object that makes a drawing server to process drawing requests. A drawing client is a .NET or any other
